

ISD Vehicle Counter Data Sheet

product overview

The ISD Vehicle Counter is a product designed to measure traffic volumes and trends. Using rubber road tubing and airswitches, the movement of vehicles is continually incremented on an 8 digit display.

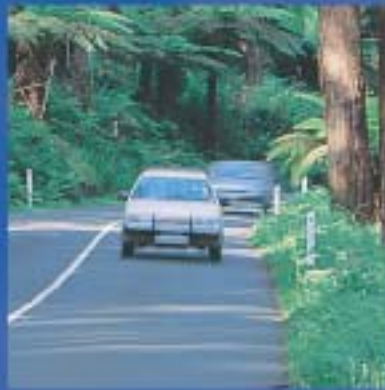

Rugged cast aluminium housing protects the unit from external damage, making it the perfect device for harsh environment traffic monitoring applications. Resetting of the counts requires a magnet, hence minimising accidental or intentional interference.

ISD Vehicle counter data sheet

Features

- 8 digit LCD display counts up to 99,999,999 vehicles
- Automatically divides counts by 2 on input
- Small, unobtrusive, reliable and robust
- Magnetic reset minimises tampering
- Serviced and supported by TCS
- All solid state components
- Low power consumption
- Traffic volume recording
- Environmentally sealed
- 5 year battery life
